

Eliminate Double or Triple Entry

Streamline Your Process with riteTIME

How much time do your employees spend filling out production tickets?
How much time do you spend reviewing, correcting, and entering the data from these tickets into other systems: accounting, payroll, ERP, scheduling?

riteTIME makes it easy for your staff to enter production data quickly and accurately on the shop floor. Because the labor data in riteTIME is easily extracted, you can eliminate:

- ▶ Supervisors re-entering production information into spreadsheets
- ▶ Payroll entering hours-worked data into the Payroll and HR systems
- ▶ Accounting entering job costing information into ERP/Accounting systems

How much time are you wasting making duplicate entries? In today's economy, every company is trying to increase operational efficiency. riteTIME can help you devote more of your resources to production, not paperwork.

Monitoring performance is only as good as the data collected on the shop floor.

You seek better performance monitoring of the workforce through accurate, real time information, and you need a data collection system that's easy for your workers to use.

Now you can simplify employee task recording, regardless of the complexity of the job, and gain valuable insight into your process as it happens.

riteTIME provides one-step, accurate, up-to-the-minute data entry for your workforce, giving you the data you need to make your production process as efficient as possible.

Simplicity Motivates and Encourages Your Work Force

Unless you provide simple ways for your employees to record data, accuracy and timeliness suffer. Worse, if employees are not comfortable with a "better" system, they'll avoid using it all together.

riteTIME is built for your shop floor and your worker.

- ▶ Sensible, clearly designed icons (similar to those seen on riteSCAN) are used on the touchscreen terminals, making job entry simple, intuitive and accurate.
- ▶ A virtual keyboard is available when more detailed entry is necessary.
- ▶ riteTIME's customizable features make data collection options easy to fit to your operations.

riteTIME

Spend More Time Doing Work, Not Documenting It

Easy task entry lets employees report confidently, accurately and in less time. Through automated tabulation, errors are reduced. With a product customized to your unique situation, up-to-the-minute production data is available for analyzing workflow as it happens.

- ▶ Quick scan ID options – dropdown selections, badge readers, barcode guns and fingerprint biometric authentication – make secure, instant and accurate data entry easy.
- ▶ Multilingual support allows shop floor employees to see all jobs they are working on in language they understand, giving them the knowledge they need to keep jobs running smoothly and eliminate downtime.
- ▶ Supervisors can easily filter information by transaction types, instantly see who's logged in, and approve, add, edit or delete employee tasks individually or as a group.

Real-Time Information for the Front Office

We've made real-time shop floor data collection easy for your employees to use, gaining instant access to accurate information to help monitor shop floor production.

- ▶ riteTIME is self-contained and can run independently of other systems, or in conjunction with your ERP, MRP, time and attendance systems, and more.
- ▶ Data is available for reports from the moment it is entered on the shop floor. riteTIME lets you track manpower, workflow, and productivity as needed via a desktop PC.
- ▶ Engineers can track job time before production begins.
- ▶ Service representatives can provide up-to-the-minute information on job status to the customer without physically chasing down the job.

Employee Name	Date/Time	Job	Operation	Machine	Shift	Good Qty	Scrap Quantity
